

## RELIABLE, INDUSTRY STANDARD NETWORK/SYSTEM MONITORING. BE PROACTIVE, NOT REACTIVE!

## KNOWLEDGE = POWER

Being informed of any possible issues will allow an organization to be able to head off issues before they become network outages and worse complete work stoppages. With a complete set of notification methods, we have the ability to know what's happening no matter where we are

## FULLY CLOUD INTEGRATED

Accessibility and redundancy is imperative to any IT Solution. Remote Monitoring that is Cloud based solves two important challenges: 1) How to ensure monitoring from offsite, 2) How to access your monitoring station from anywhere in the world. Without these two features, you will not be prepared.

## THE ADVANCE2000 VALUE

Advance2000 has built its Monitoring solution utilizing the most advanced, industry standard platforms and tools available today. Our solution brings together years of expertise in Network management, performance evaluation, tuning, threat detection, identity management, and systems integration. Advance2000 also provides 24x7 telephone and email support for all technical and billing issues with our hosting service to ensure your complete satisfaction.

## FEATURE AND BENEFITS

Advance2000 Remote Monitoring offers its customers the ability to:

- Monitor all network devices
- Monitor all platforms/OSs
- Monitor all Services
- Monitor all Applications
- Monitor all Network Utilization
- Monitor all Bandwidth

## OUR MONITORING SOLUTION ALSO INCLUDES:

- A simple client facing interface to allow customers the ability to see their network health real-time
- Notifications and an SLA to ensure communication is never an issue
- A support infrastructure in place to assist clients, who request it, in resolving issues ASAP
